

OFF-GRID OUTDOOR PRODUCTS

# WOOD-FIRED ALUMINUM

# HOT TUB

Made for the off-grid environment, where electricity or gas fuels are not needed, the Off-Grid Outdoor Products Wood-Fired Aluminum Hot Tub is professionally welded with quality marine grade aluminum.

The tub is lined with an attractive fusion bond epoxy powder coating which protects the aluminum from corrosion, makes cleaning very easy and prevents skin from contacting bare metal.

The 6 foot diameter model includes bench seating (comfortable for four), a stove fence, two piece cover, and outer decorative planking which also provides insulation from heat loss, all made from attractive Western Red Cedar. Stainless steel hardware is used throughout to resist corrosion.

The Hot Tub is heated by an all stainless steel, efficient, wood burning **Aquafire™** stove, which can heat the water to a pleasant soaking temperature in just 2 hours. The stainless steel stove is completed with a UL listed "Selkirk" stainless steel insulated chimney to protect against accidental contact, and a stainless-steel rain cap with spark arrester.

Installation is quick and easy... simply carry to a level place with a great view, fill with water (fresh or salt water), fill the stove with wood and light!

Sit back and relax - no matter what the conditions outside - and feel the warmth and comfort of your Off-Grid Outdoor Products Wood-Fired Aluminum Hot Tub.

# HOT TUB

The Hot Tub is manufactured in Canada to exacting standards using Marine grade (5052) aluminum, creating a lightweight tub for easy portability, resistance to leakage, and excellent durability.

Both the tub and the stainless steel stove are professionally welded for a leaktight result. Welding also creates a more cosmetically appealing finish and when powder coated with Fusion Bond Epoxy (tub only) results in easier cleaning, less maintenance, and a smooth finish which feels better to exposed skin.

The tub is equipped with a welded overflow fitting, a large drain with a tap making it easy to empty quickly. It is finished with a rolled aluminum tube welded around the top edge to create stability and to be more comfortable to rest against.

The exterior of the tub is wrapped in a Reflectix® insulation to reflect the heat energy back to the aluminum tub. Then it is finished with Western Red Cedar planking coated with CETOL® translucent satin protective wood finish that provides ultraviolet and weather protection.

The bench seating inside the tub is constructed with aluminum brackets fixed to the side walls for an unobstructed floor. The seats and the stove fence are also made of Western Red Cedar and are fastened with stainless steel hardware which resists corrosion and oxidization.

The tub is equipped with a removable aluminum cover, and a removable two piece lid for the main section of the tub which is made with Western Red Cedar. These covers provide protection from debris and help maintain water temperature when the tub is not occupied.

Our **Aquafire™** underwater stove is manufactured from Austinitic grade stainless steel which resists corrosion and is the chosen material to withstand the heat and stress of a wood fire under water. The firebox is accessible through the top and the lid of the stove is designed to control the draft to the fire.

## Specifications:

- o diameter - 72 inches
- o water depth - 40 inches
- o seating capacity - 4 to 6
- o water capacity - 500 gallons
- o tub weight dry - 180 pounds
- o tub weight complete - filled with water - 4360 pounds
- o chimney height - 72 inches
- o fresh or salt water - no chemicals required

## Warranty:

Guaranteed for 1 year against manufacture defects.
